University Of Auckland
2014 - 2018

Design

UI / UX Design, Design Systems, User Research, AI Prototyping, Handoff, Accessibility, AI-First Design Processes

Tools

Figma, Claude, PostHog, Dovetail & UserInterviews

Previous dev skills

HTML/CSS, JS, React, Git, Agile

Previously at Google, Macquarie and MYOB as a Software Engineer

Senior Product Designer @ Vertice

London, United Kingdom 🇬🇧
Aug 2025 - Present

I am currently leading the reimagining of the procurement experience, placing AI at the heart of a workflow that has historically been manual, rigid, fragmented and slow. I am designing an experience that is intelligent and adaptive for the people using it day to day, while remaining deliberately structured where compliance, governance and auditability demand it. I am driving consistency across the platform and reshaping our most critical surfaces to improve usability, accelerate adoption and make the product's value unmistakable from the first interaction.

Product Designer @ Atlassian

Remote, New Zealand 🇳🇿
Apr 2022 - Dec 2024

Within the complex ecosystem of a company like Atlassian, I championed a system for how software teams understood and improved the health of their components. Through scorecards and thoughtfully surfaced metrics, I turned dense engineering signals into digestible, actionable recommendations, giving teams a clear path to raising their standards and equipping leadership with the visibility to make confident, informed decisions.

Frontend Engineer @ Jasper

Auckland, New Zealand 🇳🇿
Nov 2020 - Apr 2022

Designed and built across Jasper's three applications (admin, investor and marketing) moving fluidly between design and frontend to ship cohesive, well-crafted experiences end to end.
